Project overview

Project Name :	DATESIGHT
Date:	19 /10/2026
Prepared By:	TEAM 3
Supervisor:	MOATAZ BADRAN
Repository:	HTTPS://GITHUB.COM/MARYAMALBADAWY/DATESIGHT.GIT
Track:	PROFESSIONAL DATA ANALYSIS

Summary

DateSight is a data analysis and dashboard project that turns Egypt's date export data into clear, decision-ready views. The team collects and models trade data for 2016–2025, cleans and validates it, analyses growth, product mix, markets, and competitors, and delivers interactive Tableau dashboards as the final product.

problem statement

Egypt is the world’s largest producer of dates (about 1.86 million tonnes a year, FAO 2023, as cited by PEI Trade) yet exports only an estimated 35,000–40,000 tonnes, so its export share is far smaller than its production lead. Exporters, investors and policy makers do not have one consolidated, interactive view of how exports have grown, where they go, how Egypt compares with competitors, and where the opportunities are. The information is scattered across trade databases, news and reports, in different units and formats.

Objectives (SMART)

Why this project matters (External objectives): What decision-makers will get from DateSight.

E1. Show exporters and policymakers, in one simple dashboard, how Egypt's date exports grew from $41.4M in 2016 to $146.9M in 2025, and why they rose or fell. How we measure it: At least 8 clear insights, each backed by a figure and a source.

E2. Help them decide where to focus: which markets buy the most, and what to expect in 2026-2027. How we measure it: Top importing markets ranked, plus a simple forecast (low / base / high).

What we will deliver (Internal objectives): What the team builds to make that happen.

I1. Build a clean, reliable dataset. How we measure it: All data checks passed; every number has a known source. Due: 13 Nov I2.

I2. Build an easy-to-use Tableau dashboard (4-5 pages). How we measure it: Test users can find the top market and the growth trend without help. Due: 30 Nov I3.

I3. Submit all DEPI documents and code on GitHub, and present the project. How we measure it: 4 of 4 milestones on time. Due: 4 Dec

Scope

IN SCOPE

- Collection, modeling, cleaning and analysis of Egypt dates export data
- Competitor benchmarking
- Interactive Tableau dashboards
- Comparison of date varieties (only if reliable data is found)
- Optional/advanced: main obstacles to Egyptian dates exports (from cited studies)

OUT OF SCOPE

- Web or mobile application, user accounts, payments
- Real-time data feeds
- Automated newsletter (listed as future work)
- Operational export advice for individual companies
